

Windows Mobile

With Windows Mobile powered devices, your workforce gets advanced messaging and collaboration capabilities through software they already know and access to the applications they need to stay productive while mobile.

Windows Mobile equips users with a PC-like experience, including Microsoft Outlook Mobile e-mail, contacts, and calendar and Microsoft Office Mobile software. The Windows Mobile platform builds on your existing IT infrastructure and utilizes familiar management tools to provide a highly scalable solution.

Outlook Mobile helps keep users on top of e-mail, customer contacts, and meetings while on the go with full synchronization between the PC, mail server, and Windows Mobile powered device. Office Mobile Word, Excel, and PowerPoint applications enable users to manage and modify documents on the mobile device and preserve changes when sent back to the desktop.

Windows Mobile Features

- Direct Push Outlook e-mail with rich features like HTML support and on-device search
- At-a-glance calendar views and enhanced meeting management options for more robust scheduling.
- View, edit, and create genuine versions of Microsoft Office Mobile files
- Single environment to implement and manage
- Messaging and security policies controlled by Exchange System Manager
- Highly scalable solution requiring no additional client licenses or middleware
- Works with existing Microsoft products and Windows Mobile 5.0 applications
- Visual Studio™ toolset for developing solutions
- SQL Server™ Compact Edition and .NET Compact Framework 2.0 in-ROM for simplified deployment
